

# MASONRY SUPPORTS

## Angle bars

**COR12 | COR15 | COR20 | COR25 | COR30 | COR36**

### Masonry base

The use of angle bars is recommended when laying the first row of hemp blocks in some applications. This solution shall be preferred for exterior insulation as an alternative to a base (silica-limestone, cellular glass, etc.) when there is no adequate foundation. They can also be used in new builds to support hemp masonry blocks when the latter are suspended. In general, the angle bar can be used as a lintel in certain applications, or can be used as a connection between two long very thick lintels.

## › ADVANTAGES

- ✓ Adapts to any support
- ✓ Fast implementation
- ✓ Flexibility on-site
- ✓ Galvanised steel
